

SPRINT -1

GAS LEAKAGE MONITORING AND ALERTING SYSTEM

Team ID	PNT2022TMID15437
Project Name	Gas Leakage Monitoring and Alerting System for Industries

SIMULATION CREATION USING WOKWI:

CODE:

```
#include <time.h>
#include <WiFi.h>
#include <PubSubClient.h>
bool exhaust_fan_on = false;
bool sprinkler_on = false;
float temperature = 0;
int gas_level = 0;
int flame = 0;
String flame_status = "";
String accident_status = "";
String sprinkler_status = "";
void setup()
{ Serial.begin(99900);
}
void loop() {
//setting a random seed
srand(time(0));
//initial variable
temperature = random(-
20,125);
gas_level = random(0,1000);
int flamereading =
random(200,1024);
flame =
map(flamereading,0,1024,0,
2);
//set a flame status
Serial.print("Temperature : ");
Serial.println(temperature);
Serial.print("Gas_level : ");
Serial.println(gas_level);
Serial.print("Flame : ");
Serial.println(flame);
switch (flame)
{case 0:
```

```

flame_status = "No Fire";
Serial.println("Flame Status : "+flame_status);
break;
case 1:
flame_status = "Fire is Detected";
Serial.println("Flame Status : "+flame_status);
break;
}
//Gas Detection
if(gas_level > 100){
Serial.println("Gas Status : Gas leakage Detected");
}
else{
exhaust_fan_on = false;
Serial.println("Gas Status : No Gas leakage Detected");
}
//send the sprinkler status
if(flame){ sprinkler_status
s = "Sprinkler ON";
Serial.println("Sprinkler Status : "+sprinkler_status);
}
else{
sprinkler_status = "Sprinkler OFF";
Serial.println("Sprinkler Status : "+sprinkler_status);
}
//toggle the fan according to gas
if(gas_level >
100){ exhaust_fan_on = true;
Serial.println("Exhaust fan Status : Fan ON");
}
else{
exhaust_fan_on = false;
Serial.println("Exhaust fan Status : Fan OFF");
}
Serial.println("");
Serial.println("");
Serial.println(" -----#####----- ");
Serial.println("");
Serial.println("");
delay(1000);
}

```

SIMULATION OUTPUT:

The screenshot shows the Wokwi web-based IDE. On the left, the sketch.ino file contains the following code:

```
1 #include <time.h>
2 #include <WiFi.h>
3 #include <PubSubClient.h>
4
5 bool exhaust_fan_on = false;
6 bool sprinkler_on = false;
7 float temperature = 0;
8 int gas_level = 0;
9 int flame = 0;
10 String flame_status = "";
11 String accident_status = "";
12 String sprinkler_status = "";
13 void setup() {
14   Serial.begin(99900);
15 }
16 void loop() {
17   //setting a random seed
18   srand(time(0));
19   //initial variable
20   temperature = random(-
21     20,125);
22   gas_level = random(0,100);
23   int flamereading =
24     random(200,1024);
25   flame =
26     map(flamereading,0,1024,0,
27     2);
28   //set a flame status
29   Serial.print("Temperature : ");
30   Serial.println(temperature);
31   Serial.print("Gas Level : ");
32   Serial.println(gas_level);
33   Serial.print("Flame : ");
34   Serial.println(flame);
35   Serial.print("Flame Status : ");
36   Serial.println(flame_status);
37   Serial.print("Gas Status : ");
38   Serial.println(gas_status);
39   Serial.print("Sprinkler Status : ");
40   Serial.println(sprinkler_status);
41   Serial.print("Exhaust fan Status : ");
42   Serial.println(exhaust_fan_status);
43 }
```

On the right, the Simulation panel shows the following output:

```
Temperature : 67.00
Gas_level : 42
Flame : 0
Flame Status : No Fire
Gas Status : No Gas Leakage Detected
Sprinkler Status : Sprinkler OFF
Exhaust fan Status : Fan OFF

-----#-----
Temperature : 93.00
Gas_level : 27
Flame : 1
Flame Status : Fire is Detected
Gas Status : No Gas leakage Detected
Sprinkler Status : Sprinkler ON
Exhaust fan Status : Fan OFF
```

CONNECTING IBM CLOUD USING PYTHON CODE:

CODE:

The screenshot shows the Visual Studio Code editor with a Python file named `ibm_code.py`. The code is as follows:

```
1 #IBM Watson IOT Platform
2 #pip install wiotp-sdk
3 import wiotp.sdk.device
4 import time
5 import random
6 myConfig = {
7   "identity": {
8     "orgId": "xz5tn5",
9     "typeId": "iot_device",
10    "deviceId": "1234"
11  },
12  "auth": {
13    "token": "123456789"
14  }
15 }
16
17 def myCommandCallback(cmd):
18   print("Message received from IBM IoT Platform: %s" % cmd.data['command'])
19   #cmd.data['command']
20
21 client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
22 client.connect()
23
24 while True:
```

The terminal output shows the successful connection and data publishing:

```
PS C:\Users\admin> conda activate base
PS C:\Users\admin> & C:\Users\admin\anaconda3\python.exe c:/Users/admin/Desktop/ibm_code.py
2022-11-17 07:54:10.559 wiotp.sdk.device.client.DeviceClient INFO Connected successfully: d:xz5tn5:iot_device:1234

```

OUTPUT IN IBM CLOUD:

The screenshot shows the AWS IoT console interface. At the top, there's a navigation bar with 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue button 'Add Device' is on the right. Below this is a header for the device '1234', which is 'Connected'. The main content area has tabs: 'Identity', 'Device Information', 'Recent Events' (selected), 'State', and 'Logs'. A message states: 'The recent events listed show the live stream of data that is coming and going from this device.' Below this is a table of recent events.

Event	Value	Format	Last Received
status	{"temperature":49,"humidity":30,"harmful_gas"...	json	a few seconds ago
status	{"temperature":93,"humidity":95,"harmful_gas"...	json	a few seconds ago
status	{"temperature":59,"humidity":59,"harmful_gas"...	json	a few seconds ago
status	{"temperature":-15,"humidity":98,"harmful_gas"...	json	a few seconds ago
status	{"temperature":93,"humidity":79,"harmful_gas"...	json	a few seconds ago

At the bottom, it indicates '0 Simulations running'.
